DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species:

- I. Claim 19 is drawn to a slide tongue mechanism that operates an electric switch for an electronic microchip sound generating device.
- II. Claim 20 is drawn to a slide tongue mechanism that moves a magnet to operate a magnetic relay, which serves as a switch for an electronic microchip sound generating device.
- III. Claim 21 is drawn to a light sensor that serves as a switch for an electronic microchip sound generating device by activating or deactivating when exposed to or concealed from a light source.

The species are independent or distinct because only one can serve as the switch for the electronic microchip sound generating device.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 18 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 3611

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
